### **Program Introduction:**

This course examines the renewed emphasis on running organizations leaner, effectively and efficiently. The renewed pressure to reduce cost as well as investment, while maintaining customer service levels is essential in world-class performance. Inventory Management is still one of the least understood practices in many companies and managers often fail to see the causal link between Inventory Management and good business results.

In addition, the mechanistic review of Min/Max reorder points will lead to disappointing results and in capital intensive companies, the value of spares in inventory often exceeds the value of all other inventory combined. Huge investments, excessive costs and low availability of stock often cause a knee-jerk reaction instead of adopting sound inventory management principles.

### **Program Objective:**

- Understand the importance of inventory & the role it plays in the profitability of the company
- Examine the most appropriate method for managing an item
- Understand the value chain in inventory management
- Apply best methods to optimize the investment in inventory
- Examine the appropriate inventory management technique for each type of item

### **Who should attend?**

- Those involved in inventory, albeit as supplier, buyer, materials planner, warehousing, finance or even end-customer
- Professionals and staff in the organization who are responsible for reducing costs, increasing productivity, raising inventory turns and enhancing customer service through high fill rates, accurate information and excellent order fulfillment
